Harry - further (per our conversation), the spot trades were executed as follows:

- 1) 1/14: Bought MXN 39,253,441.02 @ 13.0975 (USD \$2,997,017.83)
- 2) 1/27: Sold MXN 38,199,653.10 @ 13.4415 (USD \$2,841,918.91)

These were executed at the same time as the buy/sell of the Mex bonds.

Hope this helps.
Vahe

Harry / Jeanne,

Per our conversation - Pershing uses the "end of day" (EOD) price from the day before settlement date. For the buy trade, they used EOD 1/15, and for the sell trade, they used EOD 1/28.

Both of Jeffrey's MXN Spot transactions were executed on the same trade date as the bonds (1/14 and 1/27, respectively).

Chart and Tazia's email included below. Please let me know should you have any additional questions.

Thank you,

Vahe

Harry -

As discussed, I am following up to identify where those "Exchange Rates" denoted with the bond purchase/sale on the Monthly Pershing statements are coming from. The below is just an illustration of the currency's volatility over the relevant time period. I will be back with the explanation and resolution ASAP.

Regards,

Tazia
