Bill says health security works ok but should be tech or digital so everyone knows I'm not just doing policy - he says "title needs teeth"

04:42:21 am

Crypto health data

09:27:10 am

Health data ciphers

09:27:57 am

Bitcoin health

09:28:36 am

Cryptohealth is funny.

Health security I think best though

12:38:08 pm

Well - Larry called / says he needs to see a "detailed scope, focus and deliverables" before he can sign off and letting me know he runs the office not bg

I said no problem!

04:22:36 pm

My guess is that he will hold me
To every single word so I need to be strategic and also somewhat flexible since it's hard
to know how things will work

If you have some time maybe think of the deliverables that would be useful and
something to be proud of - I will work on all the rest since he wants me to circle back w
all the MSFT and foundation leaders too

04:24:34 pm

Why does bg get kicked around like this? So silly

04:24:54 pm

using the zero knowledge proof concept to keep totally private and secure the
personal health info of the person while the same time being able to use the
underlying data to create a usable data base.

04:25:33 pm

either a version of block chain, encryption or personal cloud. protecting the rights of
the people at risk. deliverable. working with cyber security experts to craft a system
designed for both security but access to digitally redacted personal info.

04:26:57 pm

see working with the cyber security people as well as hippo.

04:27:29 pm

possibly the next version of a wearable. a sensor that has protected input based on
personal history etc.

04:28:07 pm

Can I do this in 6 months?

04:29:09 pm

It's more Msft Than anything else

04:29:26 pm

yes, its also foundation re sensitive info on one hand and relevant data base creation and manipulation on the other

04:30:15 pm

oo

More Questions:

1. How can I be public about being the one that is doing this (surgeon general) and not just handing this off to msft? Publishing?

2. Have you heard of aardhar the Indian biometric made by Nandan Nilekani? Bill loves. Could this be a new type of social security number and used for all types of identity with health as a single use case?

04:31:12 pm

it has to be run by a doctor and not a computer scientist\

04:32:15 pm

oo

If i do something great I want ppl to know I'm involved. It's been hard being the one to do stuff and others get credit.

04:32:18 pm

Ok

04:32:23 pm

director of the cryptographic health data initiative

04:33:22 pm

oo

04:34:51 pm

interesting but too tech and not on point

04:36:18 pm

No I mean that is the only patent I could find associated with those exact keywords

04:39:28 pm

2005

04:39:33 pm
