[Redacted]

Ok this might freak you out. I think I found the plaque and tangle analogue in plants. Root cells exactly analogous in function to our hippocampus. See top right.

Very very spooky. I think this is plant Alzheimer. I went digging through Monsanto data ...

Ec  
09:11:50 am

Exactly

09:11:59 am

P

09:15:46 am

Do plants dominate animals by getting them to ingest them?  
Are molds animal plant communication?  
Are viruses plant signaling ?  
Do plants get humans to save them including genetic engineering

09:18:16 am

Aspirin ?

09:27:06 am

o

Probably. Viruses may be like plant warrior weapons

04:03:58 pm

For being sessile they are amazingly durable

Then again each plant has like 50 vaginas

04:04:48 pm

Salicylate acid ( aspirin) is a big part of plant metabolism

04:05:26 pm

Salicylic

04:05:37 pm

my type of vagina

04:05:53 pm

o

Think about it

04:06:02 pm

If you couldn't move and had to stay alive you'd clone yourself a billion times

04:06:22 pm

Getting closer - I think we know the answer very convinced

04:07:30 pm

You were right

04:07:37 pm

Why is no one connecting dots

04:07:59 pm

We will!

04:08:10 pm

Sorry was on a call what's up

06:35:17 pm

call , just to play

06:37:48 pm

So much to play

06:56:46 pm

We need to do a retreat

06:56:52 pm

Was thinking about how to get you all the stuff to read.

One idea ... I can format everything and send to Kinkos and they will print at whatever location you are near and someone can pick it up.

Or, we can create a shared google drive where we put everything

06:57:43 pm

share drive, but you'll have to give me some directions.

06:58:28 pm

are you finding it as fun as i do

06:58:36 pm

Ok let me figure out how to create

06:58:41 pm

Oh my goodness it's crazy

06:58:46 pm

yup

06:58:53 pm

Unexplored

06:58:58 pm

Plants might be the higher life form

06:59:04 pm

When we figure this out ... how do we "actualize" it?

06:59:27 pm

I was going to suggest a super secret project w Monsanto but they just got bought by Baxter

06:59:50 pm

bayer

06:59:52 pm

So maybe even better?

06:59:59 pm

you can give a talk at ..... ted. sci-fi foo. . can we get blill to play. or is it too smart

07:00:17 pm

Bill won't

07:00:25 pm

good

07:00:31 pm

He believes it is Tau. He says the scientific experiments are flawed and that the tangle plaque stuff is right

07:00:52 pm

Then again he doesn't know the difference be grey and white matter

07:01:05 pm

He asked me to explore all the alternative mechanisms and I was trying to put them forward but he really wants is to understand the current pipeline and all the trials. That are DUMB.

07:02:09 pm

We can't just be "Nancy drew" there has to be some substance behind this / a lab or a project or something

Will think

07:03:12 pm

Still think Monsanto special projects in best secret place to QUIETLY explore plant dementia and make a deal w Bayer their new owner that we can come up w solutions forever.

07:03:58 pm

Bayer is a badass company historically

07:04:06 pm
