11:22:36 am

try the last images first

11:22:46 am

they are all focused on plants. how wild that so far no connections with human brains. ?

11:28:58 am

11:38:51 am

vagus nerve biome

11:38:51 am

Will watch today on my flight or try to download. Having a root canal now yuck and then off to Texas.

03:35:46 pm

Bg not giving up on health as you may know.

Emeritus.

03:38:42 pm

I tried out the concept on two of bg key science ppl at the foundation and both are neurologists. One is president of the health team and the other is his #2 both are former pharma

03:39:36 pm

They told me I was crazy. Of course they were drinking a lot of wine and I wasnt (I hate that purple teeth look) anyway they said the future is microglia

03:40:16 pm

no it is not. that is not a theory , that is an observation

03:40:49 pm

I understand

03:41:48 pm

"The future of neuroscience pharma lies in understanding microglia"

03:42:11 pm

They both were execs at pharma and tell me that is the new neuro focus

03:42:50 pm

More in a few hours ROOT CANAL

03:44:24 pm

03:44:57 pm

Was thinking about it

The big deal in evolution was when we moved from sessile plants to moveable stuff --- all the sudden we had roots and an extended nervous system that needed to be connected --- that's why there is a vagus nerve.

But mostly the enteric nervous system basically allowed us to extend our reach to Find nutrients and mate

09:39:47 pm

Everything that happens to our bodies is a response to a stressor

In the outside we get scars

On the inside we get random protein aggregations

09:40:26 pm

Plants have salt water temperature stressors and we oddly enough do too

Plus how we respond to pathogens is similar

09:40:54 pm

But human researchers will never agree and it will all be about primates etc

09:41:10 pm

And yeast

09:41:12 pm

But so not useful

09:41:17 pm

Ok am boarding my flight w a hole in my head and a paralyzed mouth and face post root canal yuck

More from Texas

09:41:40 pm

09:41:43 pm

Boone told me something funny on the phone. I asked him about one of the participants at this event ...

09:42:30 pm

"he's all hat and no cattle"

09:45:27 pm
