Dear [REDACTED]

Please tell Jeffrey the following :

Tsinghua university is the best university with the best students of China .

The university , upon my suggestions , agree to build a campus in Boston area to have full interactions with local universities in Boston and America

The ambition is to build it to be a first class insitiute connecting research and academic activities between China and America , or the rest of the world

Besides building the campus itself , we are looking for fifty million per year to hire first class scholars , Postdoct and students. And interacting with faculties from Harvard , MIT and other places

We want to start out on the following subjects : math science which is taking in

Broad sense : mathematics that are related to other science including biology .phyiscs and economics .

Management linked with Harvard business school .(Warren McFarlan of HBS may be interested to come to work there . And so is Sloan school)

Government policy linked to JFK school of Harvard .

The first stage is to build on this area and we find a building on 1550 soldier fields road , not far from Harvard

It has 44000 sq ft and 150 parking space . (Potentially one can buy up the neighbors to double the space) I enclose some explanation here.

In the mature period , we are looking for operation budget of 50 million dollars per year .

But at the beginning , it would be much smaller

Please let me know I what Jeffrey thinks

Best regards

Yau
