Hi Kathy,

Here's a couple notes about what we discussed today:

I suggest having the contractors that ran the wires for the speakers run network cables to the office and to the basement from the existing router. We can add AirPort Extremes to each of those locations once the cables are in place.

You can add a Sonos Connect (<http://www.sonos.com/shop/connect>) to the existing receiver to play spotify over the speakers in your living room.

There are outdoor speakers that look like rocks to blend with the landscaping:

<http://www.rockustics.com/products/>
<http://outdoorspeakerstore.com/Rock-Speakers.html>
<http://www.outdoorspeakerdepot.com/rockspeaker.html>

The Cisco wifi router that your work provided is supposed to VPN into the office and allow the phone to connect; it appears that the Cisco router has lost it's configuration altogether, so your IT should check it out.

We should add an Apple TV to your DC home receiver and replace the Blu-Ray player in NY. This will allow you to watch Netflix and iTunes content directly on the TV.

I couldn't find a sufficiently compact laser multi-function printer, so instead I've asked Rich to order two inkjet Brother printers. They're roughly the same size as the HP printer in your NYC home, and will scan, copy and print (they also print from your iPhone and iPad as a bonus).

It was a pleasure meeting you. Please let me know if you have any questions.

~james
